

# Fuel economy, emissions and running costs

MG ZS EV Excite

## Running costs

Total monthly electricity cost\*  
**£40.36**

**VED (road tax) for 12 months**

Year 1  
**£0.00**

Year 2 onwards  
**£0.00**

Year 1 rate is linked to CO<sub>2</sub> emissions (the lower your vehicle's emissions the less you have to pay), fuel type and emission standard (diesels only). Cars with a list price over £40,000 when new pay an extra £320 per year from years 2 to 6, which is not included here.

## Electric range (combined)

This tells you roughly how far you might be able to drive on a full electric charge, averaged across various journey types (city to motorway). Whilst achievable in ideal conditions, 'real world' day-to-day journeys are never the same and affected by many external factors, meaning your individual electric range may well be different.

**163 miles**

## Tailpipe Emissions

CO<sub>2</sub> is the main greenhouse gas responsible for climate change

### Emission standards

Ultra Low Emission Vehicle **ULEV**

Zero Tailpipe Emissions Vehicle **ZEV**

### Air quality emission zone compliance

Clean Air Zones (England and Wales) **CAZ**

Ultra Low Emission Zone (London) **ULEZ**

This vehicle meets the emissions standard for private cars set by government under the Clean Air Zone (CAZ) framework for England and Wales currently in place until 2025. Stricter CAZ standards and restrictions could then apply. Some local authorities may also impose more stringent controls in certain areas. A ULEV meets the current government standard for an Ultra Low Emission Vehicle, stricter standards could apply in the future.

## Fuel economy

**Environmental information:** A guide on fuel economy and CO<sub>2</sub> emissions which contains data for all new passenger car models is available at any point of sale free of charge. In addition to the fuel efficiency of a car, driving behaviour as well as other non-technical factors play a role in determining a car's fuel consumption and CO<sub>2</sub> emissions. CO<sub>2</sub> is the main greenhouse gas responsible for climate change.

<b>Make/model:</b>	MG ZS EV Excite	<b>Engine capacity (cc):</b>	N/A
<b>Fuel type:</b>	Electric	<b>Transmission:</b>	N/A

### Fuel consumption:

Drive cycle	Litres/100km	Mpg
Low (city)	N/A	N/A
Medium (town)	N/A	N/A
High (rural)	N/A	N/A
Extra High (motorway)	N/A	N/A
Combined average		

**Electricity consumption: 3.3 miles/kWh**

**Carbon dioxide emissions: 0g/km**

All electric range and electricity consumption figures are from the WLTP / NEDC laboratory test and are specific to this car. The new WLTP test provides a more realistic and reliable indication of what's achievable, in ideal conditions than NEDC which is being phased out. However, as no test can fully reflect real-world driving conditions and behaviour, there will always be some differences. Comparisons between WLTP-tested and NEDC-tested vehicles should not be made in relation to electric range and electricity consumption.

\* Estimated monthly electricity cost is based on an average of 10,000 miles per year. Calculation uses the WLTP / NEDC\*\* combined electricity consumption figure and electricity cost of: 15.5p/kWh (at April 2020).
